

## 17<sup>th</sup> December - O Wisdom-Owl

In the final days of Advent prayers are said beginning with 'O' and a characteristic of Jesus as he appears in the Bible. This begins today with 'O Wisdom'.

Owls cannot move their eyes in their sockets, but they can turn their heads all the way round to see objects behind them. As well as excellent night vision, owls have very acute hearing and often catch prey which they can hear but not see moving in the grass below them. Although many owls are nocturnal, there are some kinds which fly during the day. A group of owls is known as a Parliament.
